A SOLVENT FREE WORLD.

THE WATER SOLUTION

The Impulse allows you to dispose of that hazardous sink once and for all.

For virtually the same monthly outlay, you get an automatic machine.

PATENT PENDING

AFFORDABLE AUTOMATION

As the country's largest manufacturer of Industrial Jet Washers, we were constantly asked...can you make it smaller? Can you make it more affordable? What about critical parts that require hand detailing? With the Impulse, the answer to all 3 questions is yes! Now a plant can be 100% solvent free.

BIODEGRADABLE CLEANING

Load your parts, start the wash cycle, and walk away. Within minutes, the hot (120-160°F) detergent and water sprays off the contamination. If necessary, you can hand detail the parts by pumping the same recycled solution through the brush.

YOU DON'T CREATE HAZARDOUS WASTE

The detergent and water solution should never require disposal:

- (1) The floating oils cascade over an interior weir plate and into the side pocket.
- (2) After the oils are removed, use the upper drain valve to capture and save all the water above the sludge line.
- (3) With the sludge removed, pour the original water content back into the tank.
- (4) Every day you add fresh water equivalent to 20% of the tank volume to compensate for evaporation. This process constantly refreshes the solution.

SPECIFICATIONS

- Overall Dimensions-49"h x 38"w x 24"d
- Working Dimensions:
work rack, 23.5" x 17"d x 12"h
for max. length, 28" x 9"d x 12"h
- Weight capacity-150 lbs.
- 20 Gallon Tank
- 4.5 KW heater and adjustable thermostat
- 1 HP pump - 20 GPM at 30 PSI
- Stainless steel brush pump
- Full load amps-24 AMPS (220V / 1 PH)
- 220V / 3 PH and 440V / 3 PH are optional
